SUMMARY

Full Stack Developer with 2 years' experience delivering scalable, user-focused web applications. Experienced in optimizing backend performance, building and integrating APIs, and implementing front-end enhancements to improve usability and reliability. Proven collaborator who resolves bugs quickly, delivers client-requested features, and supports cross-functional teams to meet project goals.

PROFESSIONAL EXPERIENCE

bitcorp. (PT. Bringin Inti Teknologi), *Backend Developer* 01/2026 – Present | South Jakarta, DKI Jakarta
Outsourced to PT BRIngin Sejahtera Makmur Pialang Asuransi
- Maintained and enhanced BBoss (BSM Business Operation System & Solution), resolving bugs to improve application stability and performance.
- Designed, developed, and deployed BRISurf Care, a web application for claim and refund registration processes.
- Delivered feature adjustments and maintenance across existing applications based on client requests and evolving business needs.

Mari Works Solution, *Full Stack Developer (Internship & Contract)* 09/2024 – 01/2026 | South Jakarta, DKI Jakarta
- *TixFly (Ticketing System SaaS) – Main project*
- Improved backend API reliability and security through bug fixes, security updates, and performance optimizations.
- Delivered client-requested features and configuration changes to meet evolving project requirements.
- Built new modules for digital video transactions and event management booking.
- Implemented forgot-password functionality across backend API and frontend interfaces.
- Customized email templates and ticket transaction workflows to support varied client and event specifications.
- Resolved numerous frontend bugs in the admin dashboard, improving stability and usability.

MariPos (Point of Sale System) – Supporting role
- Resolved backend issues affecting seat availability and restaurant transactions.
- Collaborated with the lead developer on bug fixes and API implementation for new features.
- Fixed promo code issues to ensure discounts were applied correctly.
- Provided and maintained backend APIs used by the mobile development team.

PT Nusantara Infrastructure, *Full Stack Developer Intern* 08/2023 – 12/2023 | South Jakarta, DKI Jakarta
- Developed features for NISA, an internal self-assessment web application.
- Refactored the application codebase to improve readability and maintainability.
- Created a new repair flow API aligned with the company's operational procedures.
- Resolved existing bugs and implemented application improvements for a smoother user experience.
